**Abstract.** We define a Lax operator as a monic pseudodifferential operator  $L(\partial)$  of order  $N \geq 1$ , such that the Lax equations  $\frac{\partial L(\partial)}{\partial t_k} = [(L^{\frac{k}{N}}(\partial))_+, L(\partial)]$  are consistent and non-zero for infinitely many positive integers  $k$ . Consistency of an equation means that its flow is defined by an evolutionary vector field. In the present paper we demonstrate that the traditional theory of the KP and the  $N$ -th KdV hierarchies holds for arbitrary scalar Lax operators.

*Keywords and phrases:* Lax equation, Lax operator, KP hierarchy,  $N$ -th KdV hierarchy, wave function, tau-function
