

教授 (Professor)

小林 俊行 (KOBAYASHI Toshiyuki)

### A. 研究概要

2014–2018 の 5 年間で、総計で約 1,500 ページの論文を著した。以下では 2018 年の文献は後述の「B. 発表論文」におけるリストの番号 [1], [2], … で表記し、2017 年以前の関連する論文はジャーナルの短縮形で引用する。

#### 1. 対称性破れ作用素の構成と分類問題

筆者の長年のモチーフである「分岐則」に関して、定性的理論から定量的理論に移行する新しいプログラムを提起した (日本数学会 70 周年記念企画特別講演 (文献 [1], [Progr. Math. '15])).  
**1.A.**(定性的理論 1—有限性) 無限次元表現の分岐則の重複度有限性を与える幾何的な必要十分条件を発見・証明し [Perspective Math. 2014], さらに、松木敏彦氏とその分類を完成した [Transf. Group 2014].

**1.B.**(定性的理論 2—離散性) 分岐則の離散性の判定条件 (Ann. Math., Invent. Math.) を極小表現に適用して離散的分岐則の生じるケースを分類した [Crelle J. 2015] (大島 (芳) と共に著).

**1.C.**(定量的理論 1—微分作用素として表せる対称性破れ作用素) 対称性破れ作用素の系統的な構成法 (F-method) を提唱し、さまざまな幾何的設定において F-method を適用し, Pevzner, Souček, Ørsted, 久保氏 等と共に, Rankin-Cohen 作用素や Juhl の共形不変な作用素の一般化する新しい微分作用素の族を構成した ([Adv. Math. 2015], [Selecta Math. 2016], 著書 [2]).

**1.D.**(定量的理論 2—対称性の破れの分類理論) 簡約リーマンの対称性破れ作用素を、非局所作用素まで含めて構成し、それを完全に分類するという問題を提起し、その最初の成功例を与えた (著書 [1], B. Speh と共に). 行列値への拡張は著書 [3], 高階への拡張は文献 [10] で与えた.

#### 2. 極小表現の大域解析

筆者は、表現論内部の問題意識とは逆の視点で、極小表現とよばれる「小さな無限次元表現」をモチーフとした新しい大域解析の可能性を提唱した。特に  $L^2$  模型の理論 (Memoirs AMS, 2011) の 1 つの応用として、保型形式における、ある重複度 1 定理を証明した (G. Savin と共に, [Math. Z. 2015]).

#### 3. 不連続群

筆者の長年のモチーフである「リーマン幾何学

の枠組を越えた不連続群」について、スペクトル理論の構築に初めて踏み込んだ。幾何学的な準備として、離散群の作用の不連続性を量的に評価する sharpness という概念を導入し、高次元タイヒミュラー空間上で安定な離散スペクトラムを構成し、長編の論文 [Adv. Math. 2016] を出版した。さらに“安定でない”スペクトラムを捉えるための理論整備として、文献 [4] および [Progr. Math. 2017] で隠れた対称性を用いた微分作用素環の構造定理を証明した。

#### 4. 非対称空間の大域解析

幾何学的群論の手法を援用し、非対称空間  $G/H$  の正則表現が  $L^p$  緩増加となるための必要十分条件を  $H$  が簡約の場合に証明し [J. Euro. Math. 2015], それを  $H$  が一般の場合に拡張した (Y. Benoist と共に, 文献 [3]).

#### 5. 可視的作用と無重複表現

複素多様体における可視的な作用という概念を導入し無重複性の伝播定理を証明し、無重複表現の統一的な構成を与えた (口頭発表 [9]).

For the last five years, I have been working on the following research topics.

#### 1. Analysis on manifolds with group symmetries

This is a challenge to the global analysis on homogeneous spaces beyond symmetric spaces.

**1.A** I introduced a notion of *real spherical manifolds* and established a geometric criterion for finite multiplicities in the induced/restricted representations [Adv.Math. 2013] with T.Oshima.

**1.B** I classified all symmetric pairs that yield finite-multiplicity branching laws in [Trans. Group, 2014] with T. Matsuki based on the criterion given in [Perspective Math. 2014] and [Adv. Math. 2013].

**1.C** Jointly with Y. Benoist [J. Euro. Math. '15], we proved a criterion for  $L^p$ -temperedness of the regular representation on  $G/H$  in the generality that  $G \supset H$  are pair of reductive groups, and in [3] for general  $H$ .

#### 2. Analysis on minimal representations

Minimal representations are one of building blocks of unitary representations. Classic examples are the Weil representation. I proposed a *geometric approach* to minimal representa-

tions, by which we could expect a fruitful theory on global analysis by *maximal symmetries*. As an application of the theory of *unitary inversion operator* on the  $L^2$ -model that generalizes the Euclidean Fourier transform with G. Mano ([Memoirs of AMS, **1000**, (2011)]), we proved a global multiplicity-one theorem in automorphic form theory with G. Savin in [Math. Z. 2015].

### 3. Multiplicity-free representations

I established the propagation theorem of multiplicity-freeness, which produces various multiplicity-free results as synthetic applications of the original theory of *visible actions* on complex manifolds.

### 4. Analysis on locally symmetric spaces—beyond the Riemannian case

Developing my long motif on discontinuous groups for non-Riemannian homogeneous spaces, I initiated the study on global analysis on locally non-Riemannian symmetric spaces with F. Kassel in [Adv. Math. 2016] and proved the existence of “stable spectrum” under deformation of discontinuous groups. A further new idea is proposed in [Progr. Math. 2017] and [4].

### 5. Restriction of representations: Branching problems and symmetry breaking operators

**5.A** I accomplished the classification of the symmetric pairs  $(\mathfrak{g}, \mathfrak{h})$  for which there exists an infinite-dimensional representation of  $G$  whose restriction to  $H$  is discretely decomposable in [Crelle 2015] with Y. Oshima.

**5.B** In the BGG category  $\mathcal{O}$ , I proposed a new effective method to find singular vectors (' $F$ -method' [Contemp. Math. AMS, 2013]), and joint with B. Ørsted, V. Souček, P. Somberg, M. Pevzner, and T. Kubo determined explicit formulae of covariant differential operators in various geometric settings ([Adv. Math. 2015], [Selecta Math. 2016], and book [2]).

**5.C** With B. Speh, I classified *symmetry breaking operators* of spherical principal series for a pair of Lorentz groups (books [1,3]). A part of this work is extended to higher rank case [10].

- D. 講義
1. 数理科学概論 I: フェルミ推定, 微積分, Taylor 展開, 偏微分, Lagrange の未定乗数法, 近似と概算, 微分方程式の初步, 多変数関数の積分を講義し, 約 200 題の演習で講義を補った. (教養学部文科 1, 2 年生)

2. 数物先端科学 IV・幾何学 XH: Representation Theory of Real Reductive Groups. I start with the interaction of representation theory of Lie groups with various branches of mathematics, and explain the fundamental role of reductive groups. I exploited Benoist–Kobayashi’s criterion for tempered homogeneous spaces by using geometric group theory, and also a state-of-the-art of the classification theory of irreducible (infinite-dimensional) representations of real reductive Lie groups such as Langland’s classification, Vogan’s classification, and the one based on  $\mathcal{D}$ -modules. A short discussion of the orbit method as a *geometric quantization* of coadjoint orbits which are typical examples of homogeneous symplectic manifolds are also discussed. For broad audience, structure theory of real reductive Lie groups such as maximal compact subgroups and the Cartan decomposition, and reductive pairs such as symmetric pairs are included followed by some applications such as the criterion for the Calabi–Markus phenomenon for discontinuous groups.
- (数理大学院・4年生共通講義)
3. 数学講究 XB (数理科学概説)「対称と大域解析」, (理学部数学科4年生), 2018年5月9日.
4. 数学講究 XA, 数学特別講究, 通年: テキスト Berline–Getzler–Vergne, “Heat Kernels and Dirac Operators” (理学部数学科4年生)
5. 「対称性と大域解析」広島大学集中講義, 2018年11月5–9日. フーリエ級数と熱方程式、正定値ではない計量をもつ多様体(擬リーマン多様体)上のラプラシアンと等長変換群, 球面調和関数, 定曲率をもつ擬リーマン対称空間上の調和解析についての解説を行った後, (擬リーマン) 対称空間の等長な不連続群による商として得られる局所対称空間上の解析に関して, 3次元反ドジッター多様体の例と用いながら, 最新的トピックを紹介した。

#### G. 受賞

1. 日本数学会出版賞 (2019) 『数学の現在  $i, e, \pi$ 』 東京大学出版会, (斎藤毅氏, 河東泰之氏との共同受賞),
2. アメリカ数学会フェロー (2017) 「簡約リー群の構造論と表現論に対する貢献」 (Contribution to Structure Theory and Representation Theory of Reductive Lie groups)
3. 2015 JMSJ 論文賞 (The JMSJ Outstanding Paper Prize) 「極小表現の構成に関する論文 Minimal representations via Bessel operators」 について」 (J. Hilgert, J. Möllers との共同受賞)
4. 紫綬褒章 (Medal with Purple Ribbon)(2014) 数学研究

#### H. 海外からのビジター

1. Paul Frank Baum, Pennsylvania State University, USA, October 17–November 3, 2018, K 理論と Dirac 作用素についての連続講義を行い, また離散群の変形とユニタリ表現に関する議論を行った.

2. Michael Pevzner, Reims University, France, November 16–17, 2018, 対称性破れ作用素に関する講演を行った.
3. Arghya Mondal, Tata Institute, India, November 16–21, 2018, 表現の分岐則のモジュラー多様体への応用についての講演を行った.
4. Ali Baklouti, Sfax University, Tunisia, December 1–4, 2018, 非リーマン等質空間への不連続群および可視的作用に関する議論を行った.
