A. 研究概要

フュージョン圏におけるフル部分圏の Drinfel'd の意味での相対可換子圏の研究を続けた。特に相対チューブ環の部分環として相対トーラス環を定義し、その上で S 行列の作用を考えた。これについて相対 Verlinde 公式を証明した。これは、フル部分圏が全体に一致する場合には、通常の Drinfel'd 中心の Verlinde 公式であり、またフル部分圏が自明な場合にはもともとのフュージョン則をそのまま書いたものである。したがって一般の場合にはこの両極端の間を「補間」したものになっている。

We have continued study of the relative Drinfel'd commutant of a full subcategory of a fusion category. We have introduced a relative torus algebra as a subalgebra of a relative tube algebra and considered an action of the S -matrix on it, and proved the relative Verlinde formula. When the subcategory coincides with the entire category, this is the usual Verlinde formula for the Drinfel'd center, and if the subcategory is trivial, this gives the original fusion rules back. So in the general case, we have an “interpolation” between these two opposite extreme cases.
