

教授 (Professor)

斎藤 純 (SAITO Takeshi)

A. 研究概要

正標数の代数多様体上のエタール層の特性サイクルを研究した。特異台の順像の次元が射の行き先の次元と一致する場合に、固有射による順像との両立性が昨年証明できたので、論文を書いて投稿した。

離散付値体の分岐群の定義を大域化し、一般的付値環についても拡大体の整数環が完全交叉という強い条件を仮定すれば、同じ方法で分岐群が定義できることを証明した。混標数の場合の非対数的分岐群の次数商は課題として残った。

I studied the characteristic cycle of an étale sheaf on a variety in positive characteristic. I completed and submitted an article on the compatibility with proper direct image under the assumption that the dimension of the direct image of the singular support equals that of the target space, proved last year.

I generalized the definition of the filtration by ramification groups of a local field and generalized the definition to a general valuation field under the assumption that the integer rings of extension fields are of complete intersection. The problem of the graded pieces in the mixed characteristic and non logarithmic case remains to be studied.

B. 発表論文
