

Lie Group and Representation Theory Seminar

Date: December 15 (Fri), 2006, 10:30–11:30

Place: RIMS, Kyoto University : Room 402

Speaker: Hadi Salmasian (Queen's University, Canada)

Title: Rank, Kirillov's Orbit method, and Small Representations

Abstract: I will survey results and applications of the theory of rank for unitary representations of reductive groups. I will explain how this concept is related to Kirillov's method of orbits. Finally, I will describe the implications of these ideas in the study of representations of exceptional groups.
